Description

THIS PRODUCT: 7mm Eyelets for use with 7mm Punch Plier deluxe.

IN GENERAL: Eyelets are small, usually round, metal or plastic fasteners that are designed to reinforce and protect holes in materials, such as fabric, leather, paper, and plastic. They are typically hollow with a flange or rim on one end and a tubular shaft. Eyelets are used for various functional and decorative purposes due to their versatility and durability.

- **Structure:** Eyelets are typically made of materials like metal (such as brass, steel, or aluminum) or plastic (usually nylon). They consist of a tubular shaft with a hollow center and a flanged or flat rim on one end.
- **Installation:** Eyelets are installed by inserting the tubular shaft through a hole in the material, and then the flanged end is either pressed or hammered down to secure the eyelet in place. This process effectively reinforces the hole, preventing tearing or fraying of the material.
