

## Magnolia x loebneri 'Leonard Messel' 400mm pot size TREE DECIDUOUS

### Description

The genus *Magnolia* consists of about 210 species of deciduous and evergreen trees and shrubs, native to Asia and the Americas. They are known for their ornamental value, particularly their showy flowers and attractive foliage. Here are some horticultural notes on the genus *Magnolia*:

**Climate and soil requirements:** *Magnolia* trees prefer a temperate to subtropical climate with moderate rainfall. They grow best in well-draining, fertile soil, with a pH range of 5.5 to 6.5.

**Light requirements:** *Magnolia* trees prefer full sun to partial shade.

**Watering:** *Magnolia* trees require regular watering, especially during the first few years after planting. Once established, they are fairly drought tolerant.

**Fertilization:** *Magnolia* trees benefit from regular fertilization, especially during the growing season. A slow-release fertilizer with a balanced NPK ratio is recommended.

**Pruning:** *Magnolia* trees require minimal pruning, but dead or damaged branches should be removed as soon as possible. Pruning should be done in late winter or early spring, before new growth appears.

**Propagation:** *Magnolia* trees can be propagated by seed or cuttings. Propagation by cuttings is the most common method and produces plants that are true to the parent.

**Pests and diseases:** *Magnolia* trees are relatively pest and disease resistant, but may occasionally be affected by scale insects, spider mites, and fungal diseases. Regular inspection and treatment can help prevent and control these issues.

**Landscape use:** *Magnolia* trees are popular ornamental trees and are commonly used in temperate to subtropical landscapes, parks, and gardens. They provide attractive, often large, elliptic leaves in shades of green or variegated, and showy, fragrant flowers in shades of white, pink, purple, or yellow. They can be used as specimen trees, in mixed borders, or as a shade tree, and their unique foliage and flowers also add interest to landscapes. In addition, some species of *Magnolia* have medicinal value and are used in traditional medicine to treat various ailments.
